USB Charging Solutions

13 Amp USB Socket Outlets

New Range USB Sockets

13 Amp USB Socket Outlets

With the global PC Industry on a downward trend and the smartphone and tablet markets continuing to grow, the need for uncluttered product charging gains momentum. In the past each mobile device was supplied with its own unique, bulky charging device which plugged into one of the mains sockets in the home, office or workplace. Nowadays smart devices use a common charging platform with USB connectors thus allowing the use of fixed installations incorporating USB sockets. Today, there is on average 6 mobile devices per household, all requiring their integral batteries to be charged to keep in contact with today's fast paced lifestyle.

Contactum has met this challenge, and developed a range of USB charging solutions available in either white moulded or decorative metal plate finishes. Available as either 1 or 2 gang switched sockets, these solutions offer 2.1A and 3.1A* charging rates respectively.

Products complement the current Aspire, Retro², Reflect, Lyric and FlatPlate families, with metal finishes of brushed steel and polished steel as standard.

The Contactum USB Solution has intelligent device recognition which provides fast, optimal device charging as well as protection for the device and socket from overload or short circuit.

* To provide optimal charging capacity 3.1A can be drawn fully from one port when one device is charging or split between 2 ports when devices are charging simultaneously.
